

Beautification of lips, or rejuvenation of lips and smile is a common procedure, that patients of all ages ask for.

A good anatomical knowledge is key to achieve great results and avoid complications. Artistic anatomy is also crucial to perfectly advice patients and get natural beautiful outcomes.

Lips beautification treatment is part of the perioral and face lower third area management: nasolabial grooves, marionettes lines, mandibular contour...

Cosmetic doctors need to master the management of adverse effects and complications so as to provide the safest treatment.

This « Ultimate Masterclass » is a 1-day hybrid course for onsite and online attendance.

Onsite attendance is a VIP course with limited seats to 20. « One to one » hands-on training is available for onsite attendees, with assisted injections on models.

Online attendees will be able to follow all conferences and live sessions but the « one to one » hands on training.

Register online to secure your seat.
